Secure documents beyond the corporate network. Notify senders of hidden sensitive data left within email attachments. Workshare Protect 9 provides users with options to clean, convert to PDF, or replace attachments with secure links to reduce the risk of data loss and support sharing large documents.

Inadvertently sending documents containing hidden data – also known as metadata – can put an organization's reputation at risk. Workshare Protect 9 uses contextual data awareness to automatically assess the risk associated with an attachment. Policies can be created and customized by IT groups to be as rigid or relaxed as needed. Identified sensitive data can be easily removed from a file before it is shared.

BUSINESS OPPORTUNITY

Achieve greater productivity by integrating security policies with native workflows so that the user experience is not interrupted.

RISK MITIGATION

Share content by replacing attachments with end-to-end encrypted links, requiring user-authenticated access to the file or document.

USER ENGAGEMENT

Notify senders of sensitive information contained within email attachments, preventing accidental exposure of sensitive data.

OPERATIONAL EFFICIENCIES

Integrate Workshare Protect 9 with Protect Server to benefit from a solution that centrally manages and removes metadata from attachments sent by email, webmail, and mobile devices.

ABOUT WORKSHARE

Workshare is a leading provider of secure enterprise file sharing and collaboration applications. Workshare allows individuals to easily create, share, and manage high-value content anywhere, on any device. Workshare enhances the efficiency of the collaborative process by enabling content owners to accurately track and compare changes from contributors simultaneously. Workshare also reduces the commercial risk posed by inadvertently sharing confidential or sensitive documents. More than 2 million professionals in 70 countries use Workshare's award-winning desktop, mobile, tablet, and online applications.
